EDUCATION

PhD Interactive AI, University Of Bristol

Sept 2023 – Dec 2027

Supervisors: Dr. Nirav Ajmeri (School of Computer Science), Dr. Emanuele Ratti (Dept. of Philosophy).

Provisional Thesis Title: “Value Aligned Multi-Agent Systems for Representative Decision Making”.

MRes Equivalent Training Year: Applied Data Science, Computational Logic, Human Computer Interaction (HCI), Natural Language processing (NLP), Responsible AI, Uncertainty.

Research Interests: Multi-Agent Systems (MAS), Value Alignment, Civic AI, Socio-technical Systems, Computational Ethics, AI and Public/Industrial Policy.

BSc Hons. Computer Science, University of Liverpool

Sept 2020 – Jun 2023

First Class Honours. Focus: Multi-Agent Reinforcement Learning, AI.

Key Modules: High Performance Computing (in C and C++), Multi-Agent Systems, Vision.

Harington School, Uppingham Community College

Sept 2013 – Jun 2020

3 A Levels between A* and A, 11 GCSEs between grades 9-6.

PUBLICATIONS

Joseph Trevorrow, Nirav Ajmeri. “Hierarchical Consensus Value Aggregation (HCVA) for Decision Support”. *Value Engineering in AI (VALE@ECAI)*, Oct. 2025

- *Shortened Abstract:* Value aggregation is a method of group decision-making that ensures decisions align to the beliefs and preferences of the group. We introduce HCVA, a method that elicits preferences of ethical principles. Using real-world data from the European Social Survey (ESS), we compare HCVA to competing techniques.
- *Key Skills Learned:* Value-Alignment and Decision-Making, Data Analysis, Philosophy and Politics, AI for Policymaking, Project management, Communication and Leadership of a project, Writing interdisciplinary work for a Computer Science audience.

Joseph Trevorrow, Mayesha Tasnim, Nirav Ajmeri. “Strategic Exploitation of Placement Guarantees in Random Serial Dictatorship: Modelling the Amsterdam School Choice System”. In: *Citizen-Centric Multiagent Systems (C-MAS)*, May 2026

- *Shortened Abstract:* School choice mechanisms are often modified to meet practical constraints. While intended to provide safety to students, modifications change incentives and can lead to strategic behaviour. We analyse implications of strategic behaviour to aid policymakers who want to predict the real-world impact of their systems.
- *Key Skills Learned:* High Performance Computing (HPC), Iterative Design, Defining Requirements for Policymaking Technology, Teamwork, Communication, Project Management.

EXPERIENCE

UKRI Policymaking Internship, UK Home Office

Mar 2026 - Jun 2026

- Part of technology exploration for the Deputy Chief Scientific Advisor Team.
- Briefed Senior Civil Servants about threats concerning children’s use of Generative AI, including the Home Office Chief Scientific Advisor.
- Independently wrote policy briefings about relevant new technologies. Adapted quickly to appropriately consider both high and low level risks and mitigations around Autonomous Vehicles (AVs) policymaking by considering how individuals, organisations, and technologies interact.
- Used rapid prototyping to develop AI-based tools to help better inform policymaking.

Supervisor, University Of Bristol

Nov 2025 — Jun 2026

Supervision of a Bachelors Computer Science dissertation on novel Reinforcement Learning methods.

Teaching Assistant, University Of Bristol

Sept 2025 – Dec 2025

Lab supervision for a Year 3 elective unit (COMS30014 Artificial Intelligence) with ~100 students studying Prolog and MAS in the module. Assisted with marking and assessment.

Editor, The Inclusive Research Collective

Mar 2024 – May 2024

- Contributed guidance and edits to the “Inclusive Research Toolkit”, which aims to promote Equality, Diversity and Inclusion (EDI) in research and development.
- Worked as part of a team of cross-disciplinary editors to understand requirements for EDI in different fields of research. This resulted in more focused pages and accurate case studies for engineering researchers.

Programmer, ALT Group

June 2023 – Sept 2023

- Programmer in a small business (~ 3 employees) developing relevant AI applications for business technology (LeanIX).
- Directed AI guidance and decision making expertise when considering relevant Large Language Models (LLMs) during product planning phase using rapid prototyping.
- Gained significant insight into the needs of industry, from small businesses to enterprise systems, to give a full rounded perspective of business technology.

SKILLS

Expertise: Multi-Agent Systems, Reinforcement Learning, Ethics & Responsible AI, Rapid Prototyping, Policymaking, Policy research, Analytical Skills, Technical Writing, Communication, Problem Solving, Python, Julia
